Paymark 2018 Software Release Notes

The main objective of the PTS 2018 release was to support the addition of UPI Contactless transactions. As such, very little additional functionality was introduced.

PTS 2018 Software Version Release

- V340

UPI Contactless

- PTS 2018 introduces UPI contactless transactions and as such all major schemes now support Contact and Contactless transactions
    - o VISA
    - o MasterCard
    - o AMEX
    - o JCB
    - o UPI

Pre-auth and completion

- Debit cards are now supported for pre-auth and completion transactions

Swipe Start

- As per Paymark specification, the Swipe Start option has been removed. All transactions now start from selecting the transaction type, then entering the amount prior to the card holder presenting their card.

1536-bit key support

- PTS2018 supports both 1536-bit and 2048-bit keys.
- Skyzer only inject 2048-bit keys and all terminals shipped from service are 2048-bit keys
- 1536-bit keys are only supported when the PTS2018 Software is downloaded via TMS. However, we encourage dealers to consider swapping out terminals to 2048-bit keys in order to reduce the number of 1536-bit key terminals in the market to meet Paymark's proposed expiry date of 30th April 2020.

Helping you get on with business.
